DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.
2. The information disclosure statement filed 10-20-03 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
4. Claims 5 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

5. Regarding claim 6, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention.

See MPEP § 2173.05(d).

6. Regarding claim 5, the addition of the word "type" to an otherwise definite expression extends the scope of the expression so as to render it indefinite. See MPEP § 2173.05(b).

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claims 1 through 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Markley et al., "Attitude Control System Conceptual Design for Geostationary Operational Environmental Satellite Spacecraft Series".

9. Markley et al. disclose an attitude control system for a geostationary satellite including elongate members such as solar generators and/or antennas, in particular deployable members, which system includes gyroscopic actuators for supplying the torque necessary for maintaining the attitude of said satellite when subjected to disturbing forces or torques on page 247, column 1, paragraph 2; wherein said gyroscopic actuators are adapted to maintain a setpoint attitude during orbit correction phases and wherein said gyroscopic actuators are adapted to control the attitude during a phase of insertion into a geostationary orbit on page 247, column 1, paragraph 2;

further including an attitude regulation loop including a corrector such that the bandwidth of said loop contains the lowest and most energetic frequencies of the flexible modes of said elongate members in figure 7; wherein said corrector of said loop is of the proportional, integral, derivative type and is associated with an attenuation filter in figure 3; and said corrector of said loop is synthesized by means of advanced system control methods such as the H-infinity and Linear Matrix Inequality methods on page 252.
